

2 FACE PLATES AND A ROLLER CAGE (THRUST RACE) CAN BE SEEN HERE AS DESCRIBED BY ROGER PIGDEN. (SEE SWIFT NL 36 PAGE 12)

I obtained these from a local bearings supplier £7.00 using the parts numbers Roger gave in his article I will have to wait until next April/07 before putting them to the test.

As Roger points out they do not add much thickness under the winding socket so I do not anticipate any problems, I intend to add a little grease.

This is the new screw I had made. It is slightly bigger in circumference than the original (that got bent) because the engineers decided to drill out and retap the old bush rather than make a new bush, they say it should be stronger, I hope so!

I was concerned that there would not be enough clearance either side of the drop arms however as you can see there is plenty of room left.

Many thanks to Roger for the modification idea

Cherry Pie
